

DATA TYPES AND VARIABLES

PROJECT REPORT

PRESENTED TO:
A&D TECH

PROPOSAL BY:
BHAVNESH DEEP

PROBLEM STATEMENT

Create a java program that collect and display personal information from user, including their name, age, salary.

SOLUTION OVERVIEW

The program uses the Scanner class to collect user input in a loop. It validates age and salary inputs to ensure they are positive and appropriately formatted numbers.

CHALLENGES AND RESOLUTIONS

INVALID INPUT HANDLING:

Ensuring the program does not crash on invalid input by using try-catch blocks for `NumberFormatException`.

DATA VALIDATION:

Checking that age is a positive integer and salary is a non-negative float.
